

# Eco Glass Filter Media - *the green & cost effective filter media*

Eco Glass Filter Media (EGFM) is the environmentally friendly filter media and a viable alternative to sand; made from glass recycled in the UK, it doesn't involve intrusive mining and the use of scarce resources.

## Key Benefits:

### • EGFM is more efficient

It can remove up to 30% more material and pollutants than sand, so saving on backwashing and the resultant water, energy and chemical treatment costs

### • EGFM keeps cleaner

It's less susceptible to biofouling, as the product is heat treated surfaces are smooth, so requiring less remedial action and again less chemical treatment to kill pollutants

### • EGFM requires less material

It's less dense than sand, requiring 15% less media to fill the equivalent filter

### • EGFM doesn't degrade

It therefore has a longer life span

### • EGFM is suitable

It is suitable for commercial and residential filters with laterals or nozzle plates.

### • EGFM is available in three grades

The media comes in Grade 1, Grade 2 and Grade 3. All grades are milled down to remove sharp points and is packed in 25kg bags.

Grade 1 – Equivalent to 16/30 grade sand

Grade 2 – Equivalent to 8/16 grade sand

Grade3 - equivalent to 6mm gravel

Grade 1 is equivalent to 16/30 grade sand  
Grade 2 is equivalent to 8/16 grade sand  
Grade 3 is equivalent to 6mm gravel

## Eco Glass Filter Media

Cat	Code	Description
D	FMEG1/25	Grade 1 EGFM – 25kg bag
D	FMEG2/25	Grade 2 EGFM – 25kg bag
D	FMEG3/25	Grade 3 EGFM – 25kg bag
